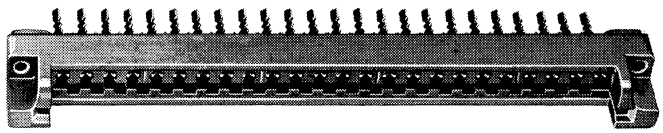
Series 5006 and 5007
ELCO VARICON* Miniature Printed Circuit Connectors



- CONNECTOR BODY is constructed of a one-piece molding with guides integrally molded in the end sections of the connector.
- MOUNTING is accomplished in two ways:
  Series 5006 — End sections have projections for mounting in rectangular cutouts in metal panels as used in ELCO's VARIPAK* card cages. All connectors can be secured simultaneously by a common metal bar screwed to the connector panel.
  Series 5007 — End sections with guides and mounting holes similar to Series 7001 for direct mounting to chassis.
- CONTACT CONFIGURATION is a single row of contacts on .200 spacing.
- POLARIZATION is accomplished simply by insertion of a polyethylene insert. No loss of contact positions is incurred. Insert can be supplied loose or inserted in specified position at ELCO. No. 50-5006-3414.
- Request Bulletin 00-5006 for other variations.

ELCO VARILOK* Crimp-Type Printed Circuit and Rack-and-Panel Connectors

The ELCO VARILOK* contact is the most recent development in applying the reliability of ELCO VARICON* Contacts to advanced self-locking, crimped-wiring applications.

The ELCO VARILOK* contact may be crimped to the wire independently, stocked until needed, then inserted into the insulator. Insertion is accomplished by merely inserting contact into any insulator hole location. May be extracted with equal facility by the use of an extraction tool. The ELCO VARILOK* contact locks into position using a spring lance. It will not twist, turn, or bend out of alignment; and has passed many stringent commercial and military pull-out tests.

ELCO VARILOK* contacts are sold loose for usage where quantities are relatively low, and for repair and/or replacement if ever necessary.

ELCO VARILOK* contacts are also available in reels containing 1800 contacts for economical long-runs of larger quantities, where automatic crimping machines are used.

New Series 7021-7022 and 7023-7024
ELCO VARICON* All-Molded, Double Tier Miniature Connector Plugs

New, one-piece molded body provides full protection for lower and upper tier printed circuit module card contacts of the 7000 Series family.

One fully assembled unit replaces lower and upper card contacts supplied on removable plastic strips. High rigidity of the all-molded body minimizes card warpage at the point of connection for perfect mating with receptacle.

ELCO Contacts, sold under the trade-mark VARICON, are securely bonded into slots of the insulator, thereby maintaining precise spacing between contacts for perfect mating, resulting in low insertion and withdrawal values, low wear, low contact resistance and long life.

Lower and upper tier contacts are each equipped with only one leg, instead of double legs, thereby:

a. Reducing cost of producing module cards, because only two rows of holes must be drilled or punched instead of four.

b. Simplifying the printed circuit layout with the result of larger distance between adjacent printed circuit pads.

c. Reducing cost of staking because lower and upper tier contacts can be staked simultaneously instead of each row individually.

One solid unit with lower and upper tier contacts bonded in position reduces assembly cost. Connector plug can be mounted directly to printed circuit module, and at customer's option staked and soldered in place or merely dip-soldered without staking. Assembly time to remove plastic strip is omitted.

Plugs are supplied two ways:

1. *Type 7021* with mounting ears to be used with connectors of the 7000 Series type *without* molded guides.
2. *Type 7022* for use with 7000 Series connectors *with* molded-on guides.

CANNON AUDIO PLUGS for low level circuit applications

CANNON® PLUGS

Cannon Audio Plugs are designed for use on audio/video and other low level circuit applications in the electronic/industrial fields where reliability, quiet operation and the elimination of mechanical interference are necessary. Some common uses are: microphones, tape recorders, medical instruments, cameras and test instrumentation computers.

XLR PLUG SERIES

The XLR incorporates the most advanced audio/electronic design concepts. Small and compact, it features resilient insulators on the socket side plus resilient ribs for shock protection and quiet operation.

Shells are zinc (receptacles), steel or zinc (plugs), with satin nickel finish. Insulators are rigid molded plastic (pin side), resilient polychloroprene (socket side). Contacts are brass, silver plated. Coupling is by the latch-lock method.

FEATURES

• QUIET OPERATION

Thick zinc cross sections for shell strength, plus resilient insulators and resilient ribs on the socket side, insures elimination of mechanical interference from shock.

• EASY TO WORK WITH

Finger grips for positive handling.
Integral cable clamp with two clamping positions for positive grip on cable sizes from 7/32 to 5/16 of an inch.
Large internal space for ease of wiring.

NEW! MICRO-GATOR CLIP

(Smallest Insulated Clip Ever Made)

U.S. Patent No. 2,762,028 Trademark Reg.

Micro-Gator

Micro-Gator with Insulator

The alligator clip with the microscopic tip! This is the alligator clip you now can use where no other clip will do . . . on printed circuits, in tight spots and on tiny terminals too crowded for anything but its microscopic tip. It offers the speed, free-handed ease and convenience associated with other Mueller alligator clips. The Micro-gator is truly small (takes 30 to weigh an ounce!) Including separate skin-tight insulator the tip is no bigger than the head of a pin! Yet the Micro-gator has ample thumb grip, and plenty of bite to stand up straight on the smallest terminals. Ample $\frac{7}{32}$" jaw spread. Solder connection. Skin-tight flexible vinyl insulator (sold separately) has "lip-action" tip slot so that jaws stay covered whether open or closed.

No. 34 (Steel, cadmium plated)

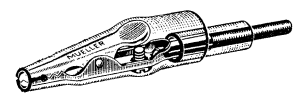
COMPLETELY INSULATED ALLIGATOR CLIPS

Patent Pending



No. 63 or 63-C Clip

Sold only as a unit, with factory-applied insulators.

A radically new development that doubles the usefulness of Alligator Clips! Completely insulated right down to the nose. Flexible 2-piece skin-type vinyl insulator of high dielectric strength, with "lip action" slotted nose that permits opening of clip without exposing metal. Insulator nose is only 13/64" O.D. The tight fitting sheath preserves all the slimness of the Alligator Clip, still giving complete protection against shorts in even the tightest spots. These clips could be bunched together—touching all around—without danger of shorting. Screw connection easily made by slipping insulator forward.

No. 63—INSULATED ALLIGATOR CLIP (STEEL)

Composed of Mueller No. 60-S Alligator Clip steel, cadmium plated, screw connection, complete with 2-piece vinyl insulator. Shipped half with red insulators, half black. 10 per box.

HOW TO DETERMINE PART NUMBERS

To arrive at the correct part number, for a Terminal Strip, refer to the drawings above and select the LETTERS or NUMBERS of the terminal, mounting lug or bracket desired; indicate them in the sequence desired, reading from left to right. May be supplied with as many as 16 lugs on a strip.

For example: In the photograph of terminal strips shown above, the first is "WWSWW." This means that the first two lugs are "W," the mounting lug is "S" and then two additional "W" lugs.

In the second strip, "131," the first lug is "1", the mounting lug is "3" and the last lug is "1".

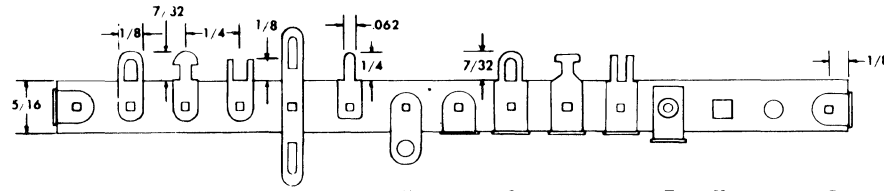
National Miniature Terminal Strips are recommended for all applications where space is a factor. These strips are made of the same materials as the STANDARD Terminal Strips described on the opposite page except smaller. Strips are 1/16" by 5/16" wide NEMA grade XP laminated phenolic with brass lugs securely eyeletted in position. Lugs are supplied in any of the finishes used on the STANDARD series with the insulation likewise available in a choice of materials and finishes.

Mounting Holes .093 are standard. .125 mounting holes are available when requested.



HOW TO DETERMINE PART NUMBERS

The identical system is used to determine the terminals, mounting lugs and brackets for the miniature series of terminal strips with one notable exception: in each instance the prefix "M" appears before the part number to designate miniature terminal strip. The LETTERS and NUMBERS are selected from those appearing on this page. May be supplied with 24 lugs on a strip.

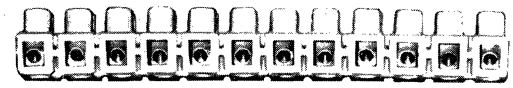
MOLDED TERMINAL BLOCKS



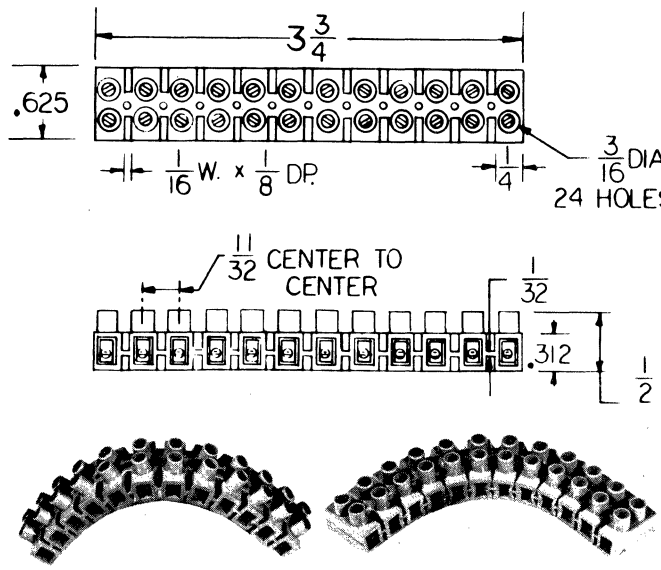
905 SERIES • FLEXIBLE

Type No. 905 Solderless Terminal Blocks are specially designed for applications where space and weight conservation are important factors. Because they are molded of flexible polyester material they may be bent in any direction to fit contours and sharp angles. Typical applications for these terminal blocks include missile guidance systems, computers, aircraft communications, underwater detecting equipment, etc.

The shortest distance between the live parts of Type No. 905 Terminal Block is 3/8". Its brass terminals will accommodate a #10 wire as a maximum. The polyester material of which the blocks are made is rated at 25 amperes.

Connection of the conductor to the block is simple. No solder is required. Insert the conductor in block and tighten the set screw.

Flexible Terminal Block No. 905 measures 3¾" long, 5/8" wide, ½" high and 11/32" between terminal centers. It may be cut to smaller sizes as required.



900 SERIES • PUSH BUTTON

Like Type No. 905, the No. 900 Terminal Block is solderless, and is molded of black nylon plastic. The push buttons are molded of red nylon plastic.

These terminal blocks have extremely high dielectric properties and are approved to resist 380 volts between terminals.

Connection of the conductor is extremely fast. Press the red button and insert the wire. Release pressure for locking. The beryllium copper contacts are molded into the block.

Type No. 900 Terminal Block is available for 12 connectors. It may be cut to smaller size if required.

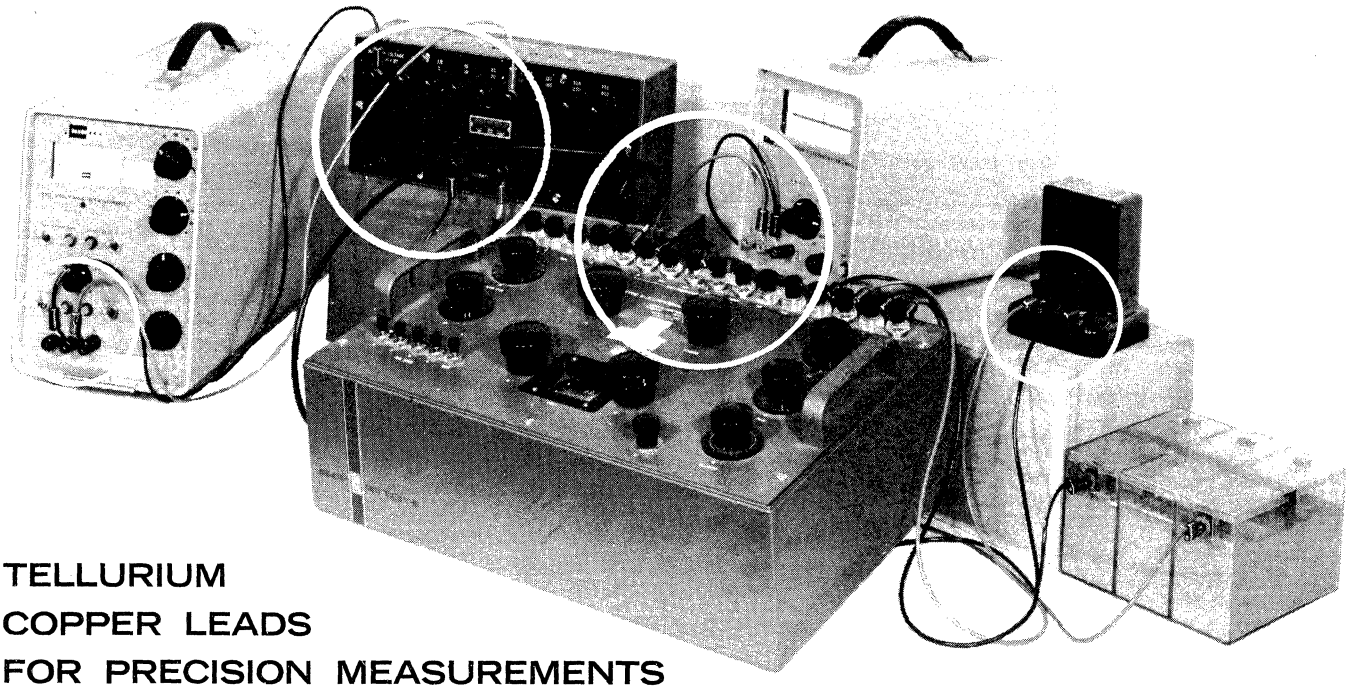
POMONA *Electronics* JUMPERS— LOW THERMAL E.M.F.



TELLURIUM COPPER LEADS FOR PRECISION MEASUREMENTS

POMONA ELECTRONICS has advanced the state of the art in measurements where Thermoelectric Effects are significant sources of error. Comparators designed for use with the Kelvin-Varley voltage divider and microvolt leads were tested with Primary Standards Laboratory equipment.
Thermoelectric voltages were not detected until the most sensitive galvanometer range was used.

THERMOELECTRIC PROPERTIES—Tellurium copper gold plated spade lugs cold-staked to multi-stranded 12 gauge COPPER wire minimize thermoelectric effects—an absolute necessity for low voltage, high precision measurements.

LOW RESISTANCE—12 gauge multi-stranded COPPER wire results in extremely low cable resistance. Spade lugs plated with 50 micro inches gold for minimum contact resistance and minimum thermal EMF when using copper binding posts (Less than 0.1 μv/c°).

POMONA Electronics — CATHODE RAY TUBE TEST ADAPTERS

■ POMONA Test Socket Adapters are ideal for making measurements of voltage, resistance, and video from the base of the picture tube. The test socket adapter is inserted between the CR Tube base and its socket. This completes the circuit and makes all connections readily accessible. Measurements can be made without tracing circuit wiring to test points below the chassis, thereby saving valuable time and increasing efficiency in trouble shooting.

NOTES

1. Teflon should protrude .040" min. below chassis.
2. Clearance between punch and die should be held to normal shop tolerances governed by material and thickness and type.
3. Predrawn hole size is governed by material type and thickness.
4. Die diameter is punch diameter plus double the metal thickness, tolerances being consistent with normal shop practice.

INSTALLATION PROCEDURE

Simplest, fastest, most economical terminal installation known, with practically no restriction as to chassis material and thickness.

Inexpensive insertion tool available from Sealectro, facilitates installation. Tool fits any drillpress (power off) or hand arbor press, to hold given PRESS-FIT Terminal. Centered over chassis hole, and with applied pressure, the PRESS-FIT Terminal slips into the hole for a rigid permanent, trouble-free installation. Just PRESS-FIT — that's it! In four easy steps:

(1) PUNCH OR DRILL HOLE . . .
.013"±.002" less than diameter of terminal section (dia. "G" in tables) passing through chassis. Minimum protrusion of bushing passing through chassis, .040". Maximum thickness of chassis .125"; for greater thickness, ask for our recomcomendations. Countersink from breakout or die side of chassis (not from punch side).

(2) COUNTERSINK ENTRANCE EDGE . . .
Use 60° countersink when chassis thickness is .040" and over; use 82° countersink when chassis thickness is less than .040". This enables centering of terminal in hole and prevents scoring the Teflon bushing. Depth and maximum diameter of countersink is determined by thickness of chassis stock and bushing's major diameter.

(3) INSERTION TOOL . . .
Insertion tool is placed in chuck of drillpress (power off) or hand arbor press. Terminal is held by tool, leaving assembler's hands free to index and center chassis hole underneath tool. Proper pressure is applied and released just as soon as major diameter of terminal seats itself.

(4) PERMANENT INSTALLATION . . .
PRESS-FIT Terminal is now permanently secured in place.

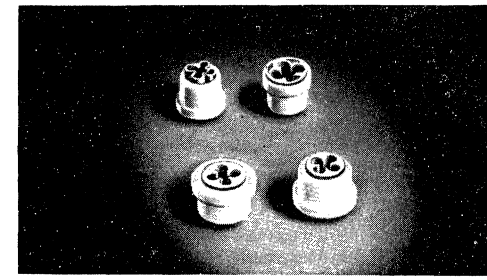
CLOVERLEAF TEFLON RECEPTACLES

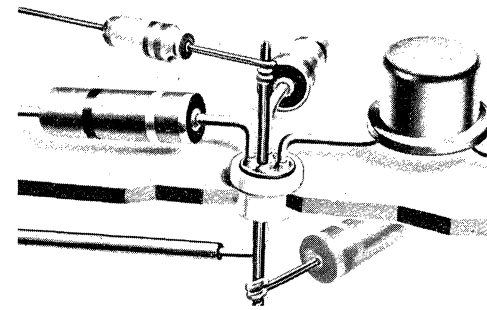
PAT. PENDING

The "Press-Fit" Cloverleaf Receptacle provides economical, yet uniformly perfect solder joints by means of dip-soldering with metal chassis. The unique Cloverleaf configuration permits insertion of four, or more wire leads, plus an optional center pin post for mounting additional components after the dip-soldering operation. The Cloverleaf design provides an encompassing hold on the leads, and excellent capillary flow of solder. The Cloverleaf receptacle is a Sealectro "Press-Fit" design. Virgin Teflon insulation, precisely machined to "Press-Fit" into the chassis provides fast, positive installation.

The reliability of dip solder joints made with the Cloverleaf receptacle, combined with the inherent dependability and repairability of metal chassis construction makes it ideal for use in high density, complex electronic instrumentation packaging, while the low cost of the terminal and its installation provides a new and better assembly technique for premium quality radio and television manufacturing.

- Best of both—dip soldering economies and uniformity with metal chassis reliability and repairability.
- Fast, positive "Press-Fit" installation. Terminal may be oriented by insertion tool.
- Optional center pin for additional component mounting.
- Cloverleaf design provides holding position of leads during soldering operations.
- Shaped and plated for maximum capillary flow of solder. No precleaning required.





Optional center pin provides top and bottom extra component mounting. Extremely useful in high-density packaging, or for after-mounting of delicate components.

"Press-Fit" installation for deep holes. As the terminal is pressfitted into the hole, the lands and grooves of the body are deflected upward, thus providing a high degree of pull-out strength as illustrated in the accompanying sketch.

Typical deep hole terminal Type FT-SM-705-L2 is a feedthru featuring a wield terminal at bottom. In this particular case, the wire is welded to the bottom terminal and drawn through the hole before terminal is pressfitted into place.

SKT-0804—GUIDED ENTRY TEST POINT JACK FOR INCREASED CHASSIS PULL-OUT STRENGTH

Featuring a beryllium-copper formed lug with unique design configuration, the SKT-0804 test point jack offers greater pull-out strength and high torque resistance. The jack is designed to provide guided-entry for an .080" diameter probe. The SKT-0804 construction permits uniform retention and greater support of the Teflon bushing by the lug.

CITIZENS BAND CRYSTALS

Extremely accurate crystals, designed to meet FCC tolerance of ±.005%. Recommended for use with 3rd overtone type oscillator having approximately 32 mmfd. input capacities. (For use with other oscillators a trimming capacitor may be necessary). These crystals match most Class D equipment in use today.

All crystals are stamped with channel number, frequency, and use (transmitting or receiving).

"SNAP ACTING" MOMENTARY CONTACT SWITCHES

PRECISION SNAP-ACTING SWITCH A precision snap-acting switch is a mechanically operated electric switch having predetermined and accurately controlled characteristics, and having contacts other than the blade and jaw, or mercury type, where the maximum separation between any butting contacts is 1/8 inch.

MOMENTARY CONTACT SWITCH A momentary contact switch is a switch which returns from the operated condition to its normal circuit condition when the actuating force is removed.

ACTUATOR An actuator is the mechanism of the switch or enclosure which, when moved as intended, will operate the contacts.

OPERATING FORCE Operating force is that straight line force in the designated direction applied to the actuator to cause the switch contacts to snap to the operated contact position.

PRETRAVEL Pretravel is the distance or angle through which the actuator moves from the actuator free position to the actuator operating position.

OVERTRAVEL Overtravel is the movement of the actuator beyond the operating position.

MOVEMENT DIFFERENTIAL Movement differential is the distance or angle from the operating position to the releasing position.

"It's Sound Planning to Specify SMITH for ELECTRONIC COMPONENTS"

TEFLON* SPAGHETTI TUBING

Teflon tubing is ideal for slip-on insulation in electricial and electronics applications. Its exceptional insulating properties provide greater reliability and resistance to high temperatures. Due to its resistance to soldering temperatures, shrink-back during soldering is virtually eliminated.

SMITH Teflon tubing is available in most AWG sizes from #30 to #0, in three basic wall thicknesses; Standard (.011 to .020"), Thin Wall (.009 to .015"), and Lightweight (.006 to .012"). Specific wall thickness for various AWG sizes is detailed in the table. All sizes are available in Natural Teflon, and any of 10 colors as indicated in the Color Code chart.

SMITH Teflon Spaghetti Tubing meets or exceeds the requirements of MIL-I-22129B, and colors conform to MIL STD-104. Standard and Thin-Wall tubing in sizes AWG #30 to #8, and Lightweight tubing in sizes AWG #28 to #9 are supplied in 100-foot dustproof, re-useable reels, polyethylene covered and closed with a special polyethylene plug. Sizes to AWG #0 are carefully packaged in 50 foot coils to prevent distortion of the tubing.

PLUGS & JACKS

"511-513" STANDARD PHONE PLUGS

General purpose plugs, designed to fit all standard jacks and available in both two and three conductor types. The "511" series, the two conductor plugs, are provided with binding head screws (No. 6) in terminals, and handles made of molded bakelite or metal when shielded plugs are required. The "513" series are three conductor types and use solder lug connections only. The 515 adapter provides a means of coupling Amphenol type microphone plugs to standard jacks. Tip and stem solid one piece construction, staked after assembly with terminal, prevents loosening in service. All metal parts brass; tip, sleeve, body, and shielded shells bright plated. Stay cord anchorage provided. Shielded types have tubular fiber liners. All plugs fit standard 0.250 I.D. jacks.

"96" SERIES JACK PANELS

Extensively used in the broadcast field, on instrumentation systems, communication networks, etc. Uses 5/8" thick bakelite panel with appropriate end brackets, side reinforcing strips and designation strips. All jack bushings are insulated from each other. Jacks, as ordinarily supplied (mounted on panels) have offset ground lugs, which considerably reduces wiring cost of installation. Straight ground lugs (duplicating W.E. jacks) available. Types 96-71, 96-72, etc., use tip rings and sleeve plugs (No. 516 and No. 517); others usually used with twin plugs (No. 506) but will fit other standard two-circuit jacks.

TERMINAL BLOCKS

Originally developed for telephone and telegraph exchange use, now are quite generally found in broadcast and microwave relay stations, large instrument systems —wherever very large numbers of circuits need convenient places of termination.

"421 SERIES"

Molded of black phenolic plastic material, including base. Provides 20 terminals per row, in two banks of ten, with up to ten rows. Base 6 1/16" long x 3" wide. Has steel mounting strip inset in groove in base, with standard mounting dimensions and accommodating #10-24 screws.

Terminals are of 0.040" tin plated brass, and are removable without disassembly of block. Have "butterfly" notched design assuring better retention of wire. Lengths of terminals in three graduated lengths for ease of wiring, and are usually identified by numbering along top row. (Not illustrated). Interchangeable with W.E. "L" series, as indicated by ( ) following TRIMM No.

"536" - "537" SERIES PLUGS

Miniaturized two circuit (536), and three circuit (537) types for use with "94" series jacks. Reduced in size, but constructed similarly to TRIMM telephone type plugs. The tip, or tip and ring, are molded into place within the body of the plug by means of a high melting molded zytel insulating matrix. Cords are attached by small terminal screws within the plug and can be replaced in a manner similar to regular switchboard patch cords.

"866" - "867" SERIES PATCH CORDS

Two conductor (866) and three conductor (867) cords using "536" and "537" plugs. Cords have overall nylon braid and other construction details of standard patch cords.

"96-700" SERIES JACK MOUNTING STRIPS

Bakelite panels, 3/8" thick, 1 1/4" wide. For "94" series jacks. One or two rows, with either 48 or 52 jacks per row. Standard designation strip is JP-35.

SOCKET EXTENDERS

Socket extenders provide a replaceable unit for use in tube testers and expensive meters. Wear is shifted from the socket in the tester to the one in the extender so that when it is worn out a new one can be easily inserted. Sockets have beryllium copper silver plated contacts for long life. An all molded outside shell is used with socket leads soldered to plug pins. All units provided with 1¾" long screw to hold unit firmly in place if desired.

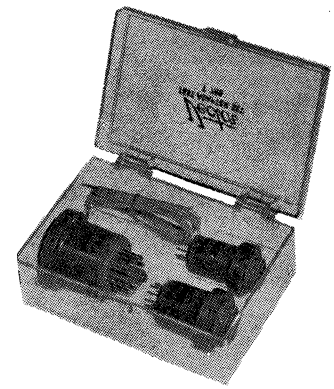
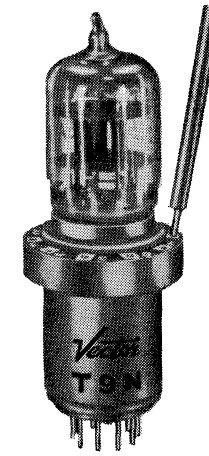
TUBE SOCKET TEST ADAPTERS



T-789



T9N

TUBE SOCKET TEST ADAPTERS are ideal for making voltage resistance and wave form measurements from the tube side of electronic equipment. To use, insert adapter between tube and socket, and replace tube in adapter socket. Special test tabs are recessed on the adapter skirt and have a hole to grip test probe and protect operator's fingers during insertion and withdrawal. Regular alligator test-clipped probes also hold on tab and socket. Castings are low loss phenolic and fit all shield bases for miniature and noval type or into standard tube clamps. Reduced body diameter permits insertion into new telescoping shields. Adapter socket contacts are beryllium copper, silver plated for long life and low resistance. Electrostatic capacity between adacent leads of the adapter is approximately 1 micro-micro-farad. Flash over voltage between adjacent terminals is in excess of 1500 volts DC.

Adapters may be purchased separately or in kits. Kit T789 consists of the 3 popular "must have" sizes, 7-pin miniature, 8-pin octal, 9-pin noval plus a P1 probe packed into a handy clear plastic carrying case.

Kit T429 consists of 9 adapters as listed below packed in a sturdy plastic case and is a commercial equivalent of the well known Navy tube socket test adapter kit.

EXTENDED TUBE SOCKET TEST ADAPTERS

For most work the short, unshielded adapters are adequate. For hard to reach locations, or where surrounding equipment restricts use of regular test adapters, the 3 to 4 inch extended adapter may be used. In these the leads between plug and socket are individually shielded to minimize coupling. The shield is brought out to a lug on the wall of the adapter and should be connected to the chassis being tested. Capacity to shield is approx. 8 mmf. per lead.

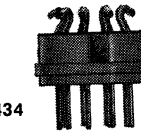
K1.434



Vector tube base plugs have Mica-filled phenolic castings and phosphor bronze cadmium plated pins. The wide variety of pin configurations on the top side of the plugs allow design features not possible with other types of plugs. Plugs may be mounted as follows:

1. With a 4-40 or 5-40 screw through the center.
2. With a split retainer ring around plug, in a plate or chassis. Retainer rings are indicated by adding "R" after "K" or "P" in the catalog number.
3. With a stamped metal saddle B36-4 for 7-pin, B37-4 for 9-pin, B38-2 for 14-pin.
4. Round shells may be attached by screws and threaded 1/72 inserts in plug periphery, except plugs with a keyway. Add "F" after "K" or "P" in the catalog number. (See Plug-in Can Section for complete units).

MULTI USE PLUG-IN KITS enable the user to readily wire and package a wide variety of circuits. Kits consist of an aluminum case with plug and accessories for mounting (a) Tube Sockets, or (b) Transistor type assemblies. For the tube circuits the Lip-Loc Case units (see left fig.) are used. These include the following parts: Mounted noval sockets, shield bases, 2 Zip wiring decks, and 11-pin Octal plug plus extra components as follows: equal number of 7-pin miniature sockets, shield bases and adapter mounting rings; plug buttons to close unused socket holes; one extra unpunched base with spacers and screws for mounting larger plugs such as the Amphenol Blue Line (not supplied in kit); one extra zip wiring deck. The extra components may be readily installed as required in place of the furnished items.

For transistor and printed circuit assemblies, the Frame-Loc type case shown at the right above is furnished with snap-in aluminum sides (not illustrated), Elco Varicon 16-pin plug, and perforated epoxy paper center wall with 1/16" holes on alternate centers of a 0.1" grid. Loose T28 Push-In terminals are furnished. Order Receptacle R1.72.

Material specifications are as follows: case, caustic etch on aluminum; sockets, mica-filled phenolic, commercial grade; terminal strips and spacers are phenolic for tube units and epoxy-paper for transistor units. Overall height of all units is 3".

Use Plugboards with attached contacts for test circuits, P. C. prototypes and short runs. Precision pre-punched 1/16" diameter holes on alternate 0.1" centers permit maximum flexibility of component location. Vector T28 MINI-KLIPS, eyelets, or standard turned terminals may be located wherever desired. For maximum economy use epoxy paper boards; for military specification requirements or additional strength use epoxy glass. All Plugboards are 1/16" thick and are available with Elco Varicon, 2 oz. copper etched or Vector Edge-pin contacts. Epoxy paper boards meet requirements MIL-P-22323 type PEE; Epoxy glass is G-10 grade per MIL-P-18177. Copper clad Epoxy paper meets MIL-P-13949 type PX, and copper-clad Epoxy glass meets MIL-P-13949B type FLGE-91.

Receptables listed are glass filled diallyl phthalate, except R315 which is mineral filled phenolic.

Edge-pins as used on 846 and 846A may be purchased separately for customer installation and may be staked readily along the edge of a "G" pattern Vectorbord with hand tool P93. Production staker available.

Micro-plugbord cards available with .025" and .040" diameter holes. See Radio Master page 854 on Micro-Vectorbord.

PIGGY-BACK PLUG

PATCH BOARDS

Vector Patchboards provide simple, but reliable low-cost units for multiple connection, single conductor patching on computers, test and central equipment. Holes are on .265" centers. PB33 has a 3x3 hole layout, PB110 has 1x10, PB210 has 2x10, PB510 has 5x10, PB1010 and PB1010-1 have a 10x10, PB1020 has two blocks of 10x10 and PB1520 is arranged in one block of holes in a 15 hole by 20 hole layout in a single panel.

Extremely low contact resistance (less than .001 ohms) and long contact life (over 2000 insertion per contact without resistance change) assures reliability. All boards are marked front and back with horizontal rows lettered alphabetically and vertical columns numbered. "Z" type brackets for flush mounting using pre-drilled mounting holes on back supplied. Special size patchboards to order.

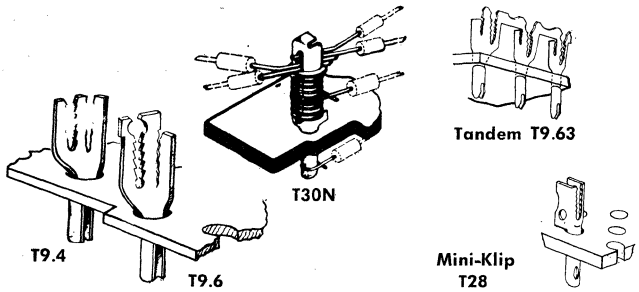
VECTOR PUSH-IN TERMINALS



VECTOR PUSH-IN TERMINALS simplify "breadboarding" and production. Push them into .062" or .093" holes in 1/16" or 3/32" Vectorbord panels and they hold without staking. (May be staked by clipping off flush with board surface or flattening with a pair of pliers for maximum holding, if desired). All terminals except T9.4A have serrated slots to grip inserted wires. Large slot accommodates most resistor and capacitor wires. Small slot hold transistor leads. The T9.4A is supplied without "teeth" on the wire slots to permit easy removal of leads when soldered components must be changed. The T9.6 has a special "snap-in" slot to accommodate .075-080 diode leads. All types have thru hole construction enabling riser wires to be inserted down through center of terminal, and slot or hole in shank for additional connections.

SOLDERLESS SPRINGCLIP TERMINALS—Reliable truly solderless terminals for fast setup of experimental circuitry. May be used over and over—permits reusing expensive components by eliminating heat damage. Extremely low contact resistance—less than .002 ohms for T30. Order insertion tool P-92A for easy insertion in .093" holes. Suggested board thickness 3/32" for best support of terminal.

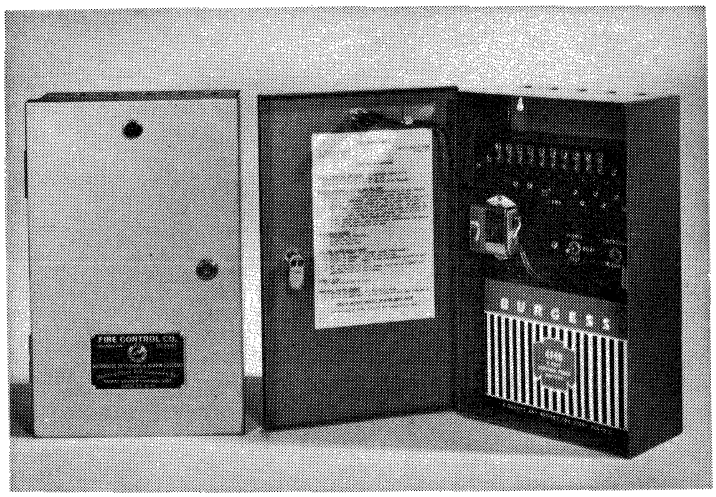
AUTOMATIC FIRE DETECTION AND ALARM SYSTEMS



Control Unit #SC-600R Underwriters' Laboratories Approved

COMPARE!

SPECIAL FEATURES MEET AND EXCEED NATIONAL FIRE CODES PAMPHLET #72

MAIN POWER SUPPLY

Input 110-125 Volts AC, 60 Cycles. Maximum current 0.25 ampere. Transformed and rectified to 6 Volts DC, maximum load 2.0 amperes. The Supply is **electrically supervised** so that a failure will sound immediate trouble alarm and automatically transfer to Emergency Power, thus assuring continuity of fire protection. When power is restored, the System automatically returns to Main Power Supply.

EMERGENCY POWER SUPPLY

6 Volt dry battery, Burgess #4F4H or equivalent. Maximum load under alarm condition 2.0 amperes. Order locally.

DETECTOR CIRCUIT

6 Volts DC, maximum current 0.15 ampere. Maximum wire run 5000 ft. #18/2. This Double-Loop Safety Circuit is **electrically supervised** so that a wire break will sound immediate trouble alarm. Emergency circuits compensate for such fault (see N/E Switch), thus assuring continuity of fire protection. Use UL Approved Fire Detector Cable #18/2 for substantial savings in installation.

ALARM CIRCUITS

6 Volts DC, maximum load 1.5 amperes. If only one bell is used, it is **electrically supervised** so that a failure will sound immediate trouble alarm. If two or more bells are used, and/or Annunciator #A-604 is added to the System, they are alternately-connected to the two alarm circuits provided. Use #14/2 wire.

NORMAL/EMERGENCY SWITCH

Provides emergency circuit adjustment.

A) Compensates for wire break in Detector Loop, permitting full response from every Detector until repairs are made.

B) Silences Trouble Buzzer but maintains Red Light to show emergency condition.

TEST/RESET/SILENCE SWITCH

Provides simple operating procedure.

A) Test the System.

B) Silence all Firebells and transfer to Red Light.

C) Reset to normal supervised operation.

CABINET

14" x 9" x 4". Gray Hammertone. Surface Mount. Cylinder lock, 2 keys.

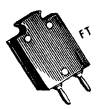
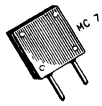
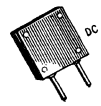
TEXAS CRYSTALS...*FOR EVERY PURPOSE*







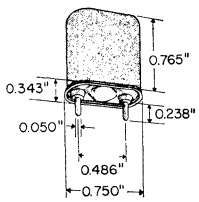
Made to order crystals in pressure type holders can be supplied in five types as shown. All TEXAS CRYSTALS are cut, lapped, and etched to exact frequencies. They are supplied for oscillator circuits having 32 MMFD capacity, unless otherwise ordered, as the crystal frequency will vary with capacity of the circuit.

CRYSTALS MADE TO ORDER

M	1,001 to	1,600 KC .005% TOL.	$4.50
	1,601 to	2,000 KC .005% TOL.	3.55
	2,001 to	2,500 KC .005% TOL.	2.75
	2,501 to	9,000 KC .005% TOL.	2.50
	9,001 to	11,000 KC .005% TOL.	3.00

Low frequency crystals from 1001 KC to 2100 KC are space mounted —all others are pressure mounted. The advantage of the pressure mount crystal is its ability to handle more current (up to 50 Milliwatts) without fracture. Order by frequency, type holder, tolerance, and circuit capacity (if known) or type of equipment in which it is to be used.

HERMETICALLY SEALED CRYSTALS MADE TO ORDER



HC 6/U .050 PINS

In recent years, manufacturers have engineered new equipment utilizing the hermetically sealed plated crystal (HC6/U). This crystal is either gold or silver plated, the plating acting as electrodes. These crystals should be used in circuits designed for them as the maximum current capacity is 10 milliwatts (5 milliwatts for overtone type). High stability of frequency is a characteristic of this crystal. All TEXAS CRYSTALS are made to conform with military specifications. When ordering for G. E., Motorola, Link, etc., for split channel operation, a sample of both transmitting and receiving crystals known to be correct, be sent us with order specifying exact crystal frequency desired. We will correlate crystals and return your samples. Type HC6/U has .050 pins and fits CE-1 socket. Type HC17/U is the same physical size except the pins are .093 diameter. Specify type circuit, if known. Order by fundamental frequency, type circuit, type holder. All plated crystals are .005% tolerance.

PAMOTOR

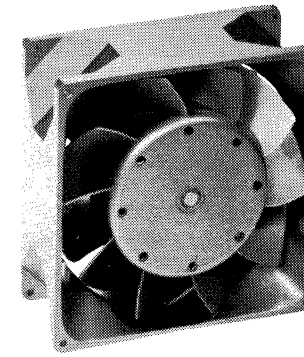
Miniature Axial Fans for High-Reliability Applications

Pamotor axial fans offer features that surpass all similar devices in construction, performance, and reliability. These miniature cooling devices have a multitude of applications in electronic gear and equipment such as computers, instrumentation equipment, industrial and military communications apparatus, military ground support systems, mobile radio gear, test and maintenance equipment, power supplies, data processing equipment, video tape recorders, entertainment electronic equipment, etc. Pamotor fans are equally-suited for use in X-ray and other heat-generating equipment which require ultra-reliable cooling. Every Pamotor fan incorporates the following construction features (most of which cannot be found in conventional fans), assuring maximum dependability at reasonable cost.

MOTOR: Inside-outside rotating motor design yields higher torque capabilities. Flywheel effect produces constant, quiet fan speed. Exceptionally close tolerances maintained for air gap result in maximum efficiency. Available in both induction and shaded-pole types.

BEARING SYSTEM: New bearing system designed for permanent lubrication uses large surface sinter-metal sleeve-bearings individually hand-fitted for radial load, plus thrust ball bearing with felt oil reservoirs for long life lubrication.

MOUNTING: Can be mounted and operated in any position without sacrifice in performance.



BALANCE: Rotor is accurately, dynamically balanced. Stator windings for induction type motor are uniform, allowing for minimum magnetic field density within the air gap.

HOUSING: Precision die cast housings insure accurate overall dimensions plus uniformity of quality. Rugged metal construction withstands physical damage in handling and installation. Warp-free materials are corrosion resistant and will not expand or contract in extreme temperature variations.

PERFORMANCE: Designed and precision manufactured for extra-long life with minimum of maintenance.

SPECIFICATIONS: All electrical materials are Class E, allowing extra margin of safety for operating in the higher ambient temperature range. Qualified environmentally to Specification MIL-T-5422E.

WARRANTY: Motor guaranteed against defects in workmanship and material for period of one year.

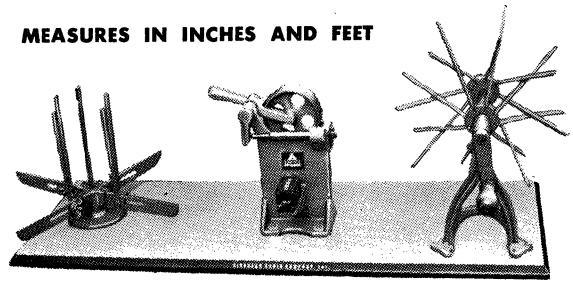
CERTIFICATE OF APPROVAL NO. 498-61
DEPARTMENT OF AGRICULTURE — STATE OF CALIFORNIA

MEASURING MACHINE

Sturdy and compact construction. Has a precision quality built counter with large numbers for easy reading and will register wire up to .9,999 feet for direct accurate reading. Can be easily reset to zero position.
Wire passes through two rollers, the upper roller being self-adjusting and the tension of the upper roller can be set by a thumb screw to provide the proper grip for very fine as well as for heavy wire.
Two hardened lead bushings with an opening of 5/8" diameter will guide the wire properly through the rollers. Bushings are removable to allow cables up to 1" dia. to pass through. Will measure accurately all electric wires, cables, coaxial cables, rope, tape, etc.

MEASURES IN INCHES AND FEET



Sold without baseboard.

WIRE WINDER

Has adjustable arms to be set to the desired coil size and the arms will open to a flat position for easy removal of the coil. Simply open thumb screw which holds the front collar tight on the shaft, push the collar in any direction to the desired position and tighten the thumb screw again.

HOLDING REEL

Compact, adjustable to size of coil and folding. Will hold spools or coils of wire.

ALL-NYLON FASTENINGS

Zytel 101 per Mil P 20693 Spec, Mil S 7742 Spec

Birnbach All-Nylon Fastenings are made of Zytel 101*, a Polymide plastic of the Nylon 6.6 Type. They offer outstanding insulating properties plus resistance to heat, shock, vibration and chemical solvents plus lightness elasticity and superior torque strength. In most cases, because of their high dielectric strength, they eliminate the need of bushings, washers or other insulation. They are corrosion resistant, non-magnetic and good torque strength thru a wide temperature range. Continuous service temperature to 300°F (150°C). Stock color: Natural. Additional colors available to order. Zytel 101 per MIL-P-17019B.

BIRNBACH NYLON BUSHINGS AND SPACERS

Model 153—A Combination SIGNAL GENERATOR and SIGNAL TRACER

The true test of the claim "two instruments in one" is: can each of the two units be used separately as well as in conjunction with each other? In the case of this versatile combination instrument, the answer is emphatically yes, for, the Signal Generator will function as a full service instrument with a range of 250 Kilocycles to 120 Megacycles and the Signal Tracer will follow any signal whether generated by a broadcasting station or injected by the Signal Generator section of Model 153. When used in combination with no dependence on outside signals, the compatibility of Model 153 provides ideal service, for unlike any standard signal tracer, the Model 153 first injects its own signal then traces that controllable signal to locate the source of trouble whether due to component or circuit by standard signal tracing technique.

SPECIFICATIONS:

SIGNAL TRACER: ● Hi-gain cascode pre-amplifier ● Pre-amplifier output available at front panel jacks for use with VTVM, oscilloscope or phones. ● Low distortion triode output stage. ● Audio Attenuator provided to prevent high signal overloading. ● 4½ inch permanent magnet speaker. ● Separate R.F. and Audio Signal tracing probes.

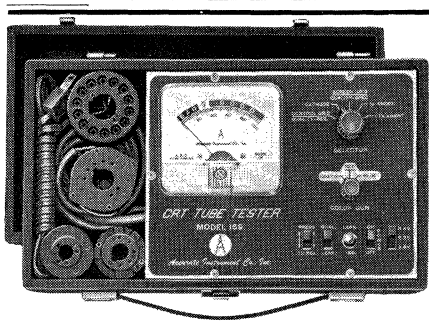
TESTING TRANSISTORS WITH MODEL 158

The Model 158 will test **all** transistors including NPN and PNP, Silicon and Germanium types, **without referring to characteristic data sheets.** The time-saving advantage of this method is self-evident. A further benefit of this service is that it will enable you to test new transistors as they are released, since no characteristic sheets are required.

TESTING TRANSISTOR RADIOS AND OTHER TRANSISTOR DEVICES WITH MODEL 158

An R.F. signal source modulated by an audio tone is injected into the transistor radio from the antenna through the R.F. stage past the mixer into the I.F. amplifier and detector stages and on to the audio amplifier. This injected signal is followed and traced through the receiver by means of the signal tracing section incorporated in the Model 158. The injected signal is heard on the front panel speaker as it is followed through the various stages.



Model 159 comes housed in a beautiful portable carrying case. Complete with sockets for all black and white tubes and all color tubes. Net price **$29.95**

Model 159 TESTS AND REJUVENATES ALL PICTURE TUBES

***ALL* BLACK AND WHITE TUBES . . .**

From 50 degree to 110 degree types — from 8" to 30" types.

***ALL* COLOR TUBES . . .**

Test *ALL* picture tubes — in the carton — out of the carton — in the set!

Specifications:

Provides **separate** filament operating voltages for the older 6.3 types and the newer 8.4 types.

Properly tests the red, green and blue sections of color tubes individually—for each section of a color tube contains its own filament, plate, grid and cathode.

Detects tubes which are apparently good but require rejuvenation. Such tubes will provide a picture seemingly good but lacking in proper definition contrast and focus.

Rejuvenation: Model 159 applies a **selective** low voltage uniformly to assure increased life with no danger of cathode damage.

DECADE RESISTORS

Class 259 • 00

CDE resistance decade boxes feature construction very similar to the type CD-capacitance decades described above. Resistors used in these decades are of relatively high wattage rating for maximum versatility.

Range selection is made by two rotary type selector switches in each decade. Like CDE capacitance decades, the resistance decades feature a custom chart permanently attached to each decade box.

Approximate dimensions for types RDA, RDB and RDC resistance decades are 3⅝" x 5" x 3". The metal encased, rack mounted type RDRM is approximately 19" x 3½" x 5".

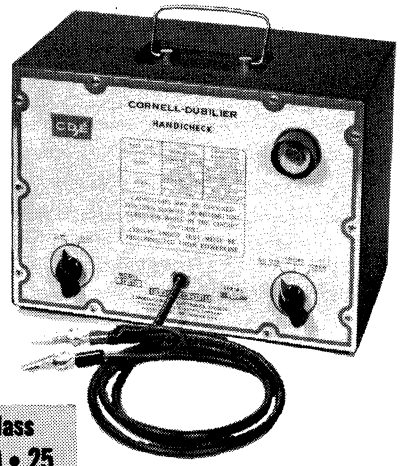
"HANDICHECK" IN-CIRCUIT CAPACITOR TESTER



The BF-90 is designed to detect open, shorted or intermittent capacitors without removing the faulted capacitor from the circuit. Indication of capacitor condition is given by a tuning eye which opens, closes, or flutters depending on capacitor condition. The BF-90 will indicate condition of capacitors from 30 pf. to .1 mfd. with as little as 50 ohms in parallel and from .1 mfd. to 2000 mfd. with as little as 1 ohm in parallel. The capacitor tester is designed for operation on 110-125V AC, 50 or 60 cycles. It is supplied in a portable metal case with dark brown wrinkle finish. Case dimensions are 5½" deep x 7" high and 10" wide. Weight of the unit is 6 lbs. 12 oz.

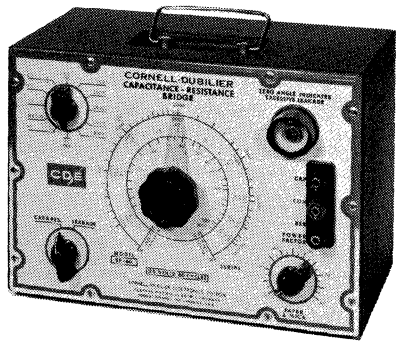
CAPACITOR RESISTOR BRIDGE



The type BF-60 bridge is designed to measure the most important capacitor and resistor characteristics. The Wein bridge used an electron "eye" for bridge null indications. The bridge will measure resistance and capacitance as well as detect defects such as shorts, opens, intermittents, high leakage and power factor and low insulation resistance. The bridge measures capacitance from 10 pf. to 1000 mfd. in four ranges; resistance from 1000 ohms to 5 meg-ohms in two ranges; and power factor to 50% at 60 cycles. Five fixed DC polarizing voltages are provided. AC power requirements are 110-125V AC, 50 or 60 cycles. Case is dark brown wrinkle finish, 5½" deep x 7" high x 10" wide. Weight is 8 lbs. 4 oz.

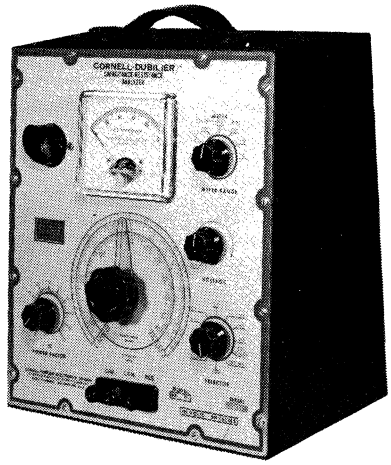
CAPACITANCE-RESISTANCE ANALYZER



The BF-71A capacitance-resistance analyzer performs functions comparable to units many times the price. The unit is a versatile addition to any service shop or laboratory. The BF-71A uses Wein bridge circuitry with an electron "eye" for null indication. It measures capacitance values from 10 pf. to 2000 mfd. in four ranges with an accuracy of ±3%. Bridge measurement voltage is .5 volts rms. Resistance measurements are from 2.5 ohms to 25 meg-ohms in three ranges; current measurements, from 2 microamps to 100 milliamps in three ranges; voltage, to 500 volts DC in three ranges; and power factor measurement, from 0 to 50%. The unit measures leakage current by meter and insulation resistance by indicator or calculation. The 3½" multiscale meter has a sensitivity of 10,000 ohms per volt with an accuracy of 2% of full scale. The internal power supply is continuously variable from 0 to 500 volts DC, 35 milliamps maximum. The BF-71A is supplied in a portable metal case finished in dark brown wrinkle enamel. Dimensions are 11" high x 10" wide x 6½" deep. Weight is 14 lbs. Power requirements are 110-125 v AC, 50 or 60 cycles.

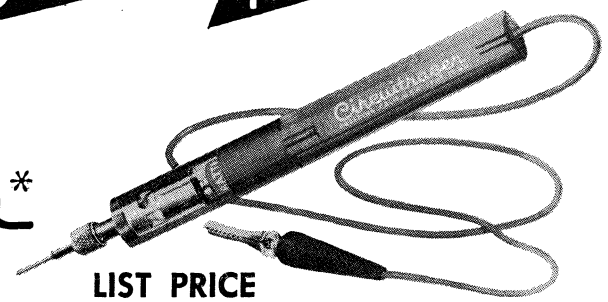
Tracks 'em Down Dead or Alive

ONLY THE VERSATILE DESCO* Circuitracer*



GIVES YOU A 3-IN-1 ELECTRICAL TEST LABORATORY

LIST PRICE $4.95 Weighs only 2½ ozs.

Satisfaction Unconditionally Guaranteed

DON'T SEND A MAN TO DO A BOY'S JOB!

Are the technicians in your laboratories and shops using expensive meters and instruments for sample continuity and voltage checks? Speed up production through the use of the tool specifically designed for this application. A meter should be used only when the value of voltage, resistance or current must be known. Under any other conditions a Circuitracer will provide the required information faster and easier than expensive, bulky meters.

CIRCUIT TESTING WITH A CIRCUITRACER IS FASTER because the signal light is in the tip at the point of contact. This makes it possible to determine the existence of a circuit or voltage without removing the eyes from the test point to read a meter.

SAVE METER REPAIR MONEY BY USING DESCO CIRCUITRACERS. An overvoltage across a meter usually results in extensive damage which takes the meter out of service until repaired or replaced. The worst that can happen to your Circuitracer is a burned out lamp that can be replaced by the operator in less than a minute. Total cost, ten or fifteen cents for the lamp!

The CIRCUITRACER is the only electrical tester (other than expensive meters) that can test dead circuits, low voltage live circuits AND high voltage live circuits. It is made of the finest materials available and is designed for long life.

DESCO TEST PROBE ADAPTERS

INSURE CONNECTOR RELIABILITY

Manual probing of harness connectors while circuit testing can damage connectors and impair reliability. Desco Test Probe Adapters were developed to provide a test fitting identical to the pins and sockets in the connectors being tested. They make the same electrical and mechanical contact as the mating connector, and insure against scratching, bending and warping.

The adapters are made in three sizes to fit connectors using #12, #16 and #20 wire gauges. The sockets are gold plated copper with a brass sheath which retains a beryllium copper spring. The pins are stainless steel to insure long life. All are made to rigid MIL-SPECS. The adapters will fit Desco Jumper Wires and the Desco Circuitracer* Tester interchangeably.

Several aircraft and missile manufacturers specify Desco Test Probe Adapters for most manual test connections. (names on request)

NON-DESTRUCTIVE D.C. VOLTAGE BREAKDOWN EQUIPMENT

Freed can supply non-destructive voltage breakdown testers for applications where the d.c. test voltage must be removed within microseconds in the event of a breakdown. Simultaneously the component under test is short circuited to prevent it from being damaged by its own capacitive charge. The instrument contains a variable slope ramp generator to apply the test voltage in applications where the capacitive current in the test sample exceeds the preset leakage current limit. An indicating voltmeter holds the reading of the breakdown voltage until reset.

Type	Leakage Current	Test Voltage	Output Accuracy	Power Requirements	Size and Weight

*Other test voltages available. Write for specifications.

LOW FREQUENCY "Q" INDICATORS

Direct indication of "Q" at low frequencies, inductance, distributed capacity, impedance and dielectric loss can also be measured. Instrument may be used to study the magnetic properties of iron core material for stability as a function of applied voltage and losses as a function of the frequency. Two units are available, the 1030-A indicates "Q" as a product of meter readings multiplied by dial settings, the 1030-B displays "Q" directly in digital readout.

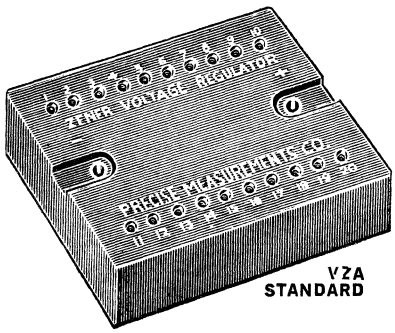
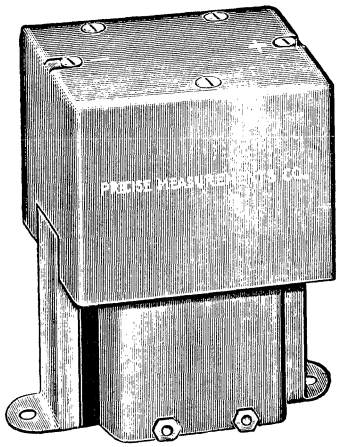
PRECISE VOLTAGE STANDARDS



VZA STANDARD



POWER SOURCE

Use these convenient reference standards for direct calibration of voltmeters, or use as a null type voltmeter by simple addition of a galvanometer. Each VZA STANDARD has twenty taps arranged in two rows. The bottom row is exactly 1/10 the voltage drop of the top row. Type VZ STANDARDS have just one known voltage (without taps), resulting in cost savings and is used for standard cell replacement. Precise Voltage Standards have several advantages over chemical cells, since they are completely solid state and can take voltage and current overloading without loss of accuracy. May be powered from batteries, external power packs or purchased complete with built in power source. Several standards may be wired in series for higher voltages or finer adjusment. All reference standards listed have 1% accuracy. Higher accuracy types with 0.1%, 0.01% and 0.001% available at higher cost.

J-B-T®

25 YEARS OF INTEGRITY IN MANUFACTURING.....

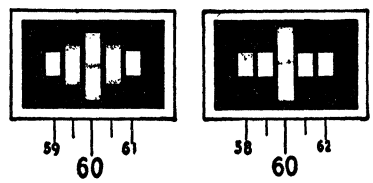
J-B-T INSTRUMENTS, INC. NEW HAVEN 8, CONN.

VIBRATING REED FREQUENCY METERS (PATENTED)

• **USES** — J-B-T Vibrating Reed Frequency Meters are used extensively in radio, telephone, and television service, on engine generator sets, in laboratories, in many types of electronic equipment, on panel and control boards, in inspection set-ups—wherever constant or known frequency is important to efficient operation of equipment. More than 20 years of continuous experience covering many thousands of these instruments are your assurance of quality for both commercial and defense applications.

• **OPERATING PRINCIPLE** — The patented, simplified design used in the J-B-T meter operates on AC or interrupted DC. Each reed is adjusted to respond by resonance to but one frequency. As the current excites the driving coil, the reed "in tune" with the frequency in the coil will respond by vibrating rapidly because of permanent magnet polarization and induced magnetism from the coil. The instrument is adapted to specified operating voltage by a series resistor. To determine frequency, simply read the reed.

• **RESPONSE PATTERNS** — These patterns differ with the increments of frequency between reeds. For example, at 60 cycles, half-cycle steps give the broad response shown below at left, whereas full cycle steps bring the sharp response at right. In general, the lower the frequency the greater the amplitude, the higher the frequency the less the amplitude. Thus a 12 cycle reed normally will have substantially greater amplitude than a 1000 cycle reed.



• **ADVANTAGES** — Guaranteed accuracy at reference temperatures of 77°F is ±0.3% or better of the AC frequency being measured, unless otherwise stated. Accuracy on interrupted DC may be somewhat less. High fatique safety factor for continuous operation. Temperature compensations are not required as temperature coefficient of reeds is only approximately 75 parts per million per degree F., negative.

• **STABILITY** — All meters are permanently calibrated at the factory and do not require subsequent adjustment. J-B-T reeds have relatively high Q characteristics, an especially desirable factor in electronic circuits. Wave form or external fields do not ordinarily have an adverse effect. Built with no pivoted parts and with lock washers at every critical point, these rugged meters can take rougher treatment than many instruments.

• **TRUST THE METER** — If a meter plugged in on a 60-cycle AC power line does not indicate exactly 60 cycles, trust the meter! Power supply may momentarily be off-frequency due to changing load conditions. All J-B-T Frequency Meters are meticulously calibrated at the factory, entirely independent of frequency of power supply. Production and inspection equipment are checked regularly against National Bureau of Standards frequency signals.

18 OR 21 REEDS

Advanced design offers 21 reeds as an interchangeable 3½" panel meter with 2-cycle intervals for close reading over the band of 380 to 420 cycles per second. Accuracy ±0.3% at reference temperature. The reed flag size is necessarily smaller than in a 9-reed 400-cycle meter, such as the model 33-FX, but the 21 reeds are located in an enlarged window 2" wide with flags 3/32" high x 1/16" wide to give maximum readability. A patented internal construction for mounting the reeds in one clamp assures ruggedness. These instruments and their variations are particularly useful where unusually close indication of frequency throughout the band is desirable. See Table of Dimensions, line 5. All have 3½" Molded Case, MIL-M-6B mounting.

36-FX-21, (as illustrated). 380-420 cycles, 21 reeds, 28 volts operation, 3½" Molded Case; 18 ohms per volt; 1.6 watts power consumption. **$43.75**

36-FX-21-115, 380-420 cycles, 21 reeds, 100-130 volts; 90 ohms per volt; 1.5 watts power consumption **$45.00**

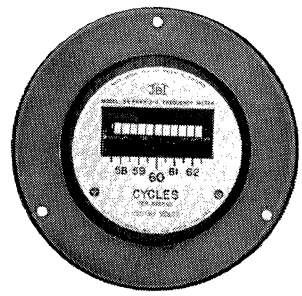
3½" SEALED FREQUENCY METERS



FHXX TYPE Sealed meters, glass-to-metal construction, with solder terminals and detachable flange, supersede the former FHX sealed meters. While JAN-I-6, MIL-M-6B, and MIL-M-10304B (Type MR36) do not refer specifically to frequency indicators, the FHXX series uses the front mounting dimensions of these specifications, and meets or exceeds the sealing and electrical requirements including 3000 volt breakdown. Electrical characteristics and accuracy are the same as for corresponding F models without the HXX designation. Every meter is tested in water where the absolute pressure of the air above the water is reduced to 2.5 inches of mercury (approx. 57,000 ft. altitude) and is maintained for one minute. For dimensions, see Table, Line 8, and Print SK-51 Rev. E. Standard voltage is 100-130.

30-FHXX, 10 reeds, 48-52 cy. and 58-62 cy. $34.30
31-FHXX, 5 reeds, 58-62 cy. 30.45
33-FHXX, 9 reeds, 380-420 cy. 40.90
34-FHXX, 9 reeds 56-64 cy. 34.05
34-FHXX-11, 11 reeds, 55-65 cy. 36.25

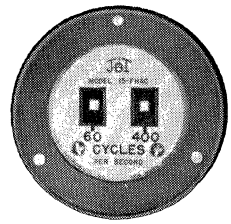
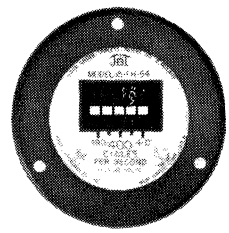
23-FHXX, 5 reeds, 380-420 cy., 100-130 volts (normally stocked) $39.80

1½" SEALED METERS





MODEL 15-FHAC. Widely used as the frequency standard on audio-oscillators, the model illustrated operates 2 reeds, 60 and 400 cycles, at approximately 8-10 volts on 0.04 watts for a cathode follower circuit. Accuracy ±0.5% at 77°F. Steel case has telephone black finish, solder terminals. Barrel is 1½" diameter; 2-3/32" detachable flange FL-4 covers glass-to-metal seal. See Table of Dimensions, line 1

15-FHAC $20.30

15-FH-5 METERS (lower photo) also use the 1½" black metal case with 2-3/32" detachable flange and glass-to-metal seal. The 15-FH-5 series features 5 reeds in a row for 100-130 volt operation. Specified where size and weight are important. Same 100% inspection for approx. 57,000 ft. altitude as FHXX types. Standard meters, but not regularly stocked. See Table of Dimensions, line 1.

15-FH-54, 5 reeds, 390-410 cycles, 1.25 watts power consumption $25.85

RUGGEDIZED AND ILLUMINATED METERS

Model with "RUG"—Sealed vibrating reed frequency meters and sealed elapsed time meters are available, when so ordered, to the intent of MIL-M-10304B, which covers ruggedization of other kinds of meters. This feature usually is specified only for extra-severe shock and vibration.

LL Construction—Requirements for lighted meter dials have led to illuminating the 3½" FHXX Series of sealed meters. Light from a source behind the panel is admitted through a sealed window built into the meter case. Inquiries are invited.

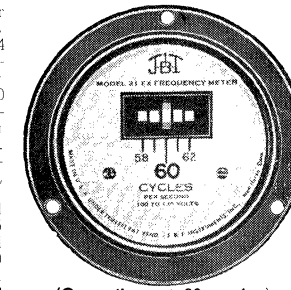
400 CYCLES, IN 1 CYCLE STEPS; 800 CYCLES

Among the variations which J-B-T produces on special order, are 21-reed, 390-410 cycles in 3½" case; and 11-reed, 780-820 cycles with 5-cycle increments. Quotations on request.

NOTE ON METER VOLTAGE

J-B-T Vibrating Reed Frequency Meters of all sizes normally are made with two studs and are designed to be connected across one phase of a multi-phase line. The single phase voltage where the meter will be used thus becomes the voltage to be specified for the meter. Special meters with extra studs are made for the purpose of using at two or more voltages, not additional phases.

2½" METERS — 5 REEDS



MODEL 21-FX, 23-FX. Matches other 2½" panel instruments. Meets ASA C39.1-1951 and MIL-M-6B (Type MR 24 or MR 25) in depth of case and mounting dimensions. J-B-T INSTRUMENTS, INC. NEW HAVEN 8, CONN.

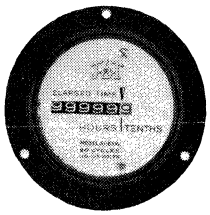
ELAPSED TIME METERS; FREQUENCY-TIME METERS; REED RELAYS AND OSCILLATOR CONTROLS

• USES AND ADVANTAGES OF ELAPSED (OR RUNNING) TIME METERS

To record operating time of AC electrical and electronic equipment, these self-starting synchronous instruments normally register in 1/10th hour steps to 9,999.9 or 99,999.9 hours, then automatically reset. They are widely used for tube life, TV equipment, punch presses, conveyors, oil burners, ground support equipment, maintenance schedules, etc. J-B-T engineers recommend the AC type of elapsed time meter for superior accuracy, especially where voltage or ambient temperature vary widely.

6-Digit WIDE-NUMERAL ELAPSED TIME METERS

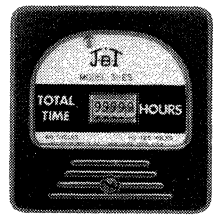


MODEL 31-EXW. The latest J-B-T elapsed time meter is Model 31-EXW, illustrated. Easily-read, wide 6-digit numerals register to 99,999.9 hours then automatically reset. Distinctive contemporary dial shows tenths in black on white, and units in white on black. The 3½" black molded case is interchangeable with Model 31-EX and FX types of frequency meters. Print SK-125 gives mounting information.

Model 31-EXW, 6-digits, 0-99,999.9 hours, 60 cy., 110-125 volts. **$16.95**

SQUARE-CASED ELAPSED TIME METERS

MODEL 31-ES. A square black molded case, matching other 3" x 3" meters, differentiates this model from the round 31-EX. Ask for Print SK-110, Rev. F showing standard rear mounting 2¼" bet. centers of molded-in studs, new rugged case with overall depth 3-11/32" behind flange, and electrical studs on center line. Variations can be made for 99,999 hours (suffix U), 230 volts, minutes, matte finish, or 50 cycles.



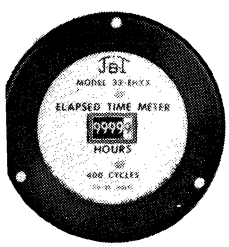
31-ES, 60 cy., 110-125 volts, 0-9,999.9 hours. **$17.05**

3½" SEALED ELAPSED TIME METERS — 60 Cycles

MODEL 31-EHXX. Where rugged requirements make a completely sealed elapsed time meter desirable, this glass-to-metal construction with flat glass front and 3½" diameter separable flange, often is specified. Heavy-duty solder terminals are supplied. Every instrument is checked in a vacuum chamber. Overall dimensions and appearances match the FHXX series sealed frequency meters. Maximum voltage between terminals and case, 1,000 volts, R.M.S. The meter registers in 1/10 hour steps to 9,999.9 hours, then automatically resets. Tenths indicator is red on white, all others in white on black. Mount according to SK-85, Rev. C.

31-EHXX, 60 cy., 110-125 volts..... **$19.75**

3½" SEALED ELAPSED TIME METERS — 400 Cycles



MODEL 33-EHXX. This stable, self-starting 400-cycle elapsed time meter is extensively used for preventive maintenance and for reliability testing and checking in a wide variety of equipment. The instrument is entirely enclosed in a 3½" flanged case, glass-to-metal sealed construction with separable flange; heavy-duty solder terminals; flat glass front. 1/10 hours are shown in red on white, all other numerals white on black. The external appearance matches FHXX frequency meter series. For dimensional details see SK-61, Rev. B.

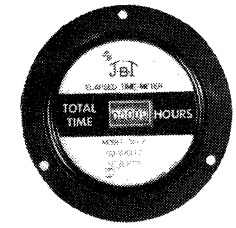
Its front mounting dimensions are the me as Type MR26 electrical indicating instruments in MIL-M-6B. ass-to-metal seal makes the instrument completely tamper-proof. ik for Print SK-68, Rev. G. (2½" 400-cycle meter, **Model 23-EHXX** so is made on special order.)

·EHXX, 60 cy., 110-125 volts **$26.00**

Popular BASIC 3½" ELAPSED TIME METERS



MODEL 31-EX. First in popularity among all J-B-T elapsed time meters, this self-starting instrument registers to 9,999.9 hours in 1/10 hour steps before automatically resetting. Red numerals on white are used for tenths, all others are white on black. Black molded case matches FX series 3½" frequency meters and completely encloses all parts. This case, with centered terminals, meets type MR34 or MR35 mounting dimensions of MIL-M-6B, also JAN-I-6. Referring to line 5 of the Table of Dimensions on the preceding page, barrel depth (B) is 2½", stud height above center (G) is zero, and all other measurements are as shown. Types for 99,999 hours, or 50 cycles, or special voltages are available on special order.

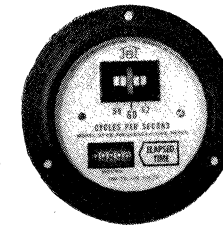
RUGGEDIZED METERS TO MIL-M-7793C

This specialized specification at present omits the popular 3½" sealed sizes. J-B-T 2½" and 3½" round sealed and ruggedized types can be certified as to various test conditions under present MIL-M-7793C and General Meter Specification MIL-M-10304B. Inquiries are invited on smaller sizes to MIL-M-7793C and subsequent revisions as they are released.

ELAPSED TIME — FREQUENCY METERS



31-FE SERIES. To conserve panel space and centralize information, this panel instrument combines elapsed time or running time meter with frequency reeds. It is used on motor generator sets and on electrical equipment where maintenance routine calls for periodic servicing. The J-B-T design, proved by years of field experience, uses a separate exciting coil for the reeds to achieve close control of reed amplitude and frequency. Reads 0-9,999.9 hours and 58-62 cy. with 5 reeds, for 100-130 volt operation; self starting. Tenths shown in red on white, all other numerals in white on black. Black metal case with front mounting per Table of Dimensions, line 6. Power consumption is 4.7 watts. For variations having 7, 9, or 11 reeds, not regularly stocked, such as Model 34-FE, see print SK-45. Rev. D.

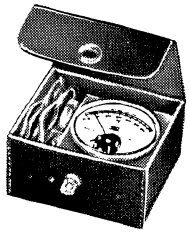
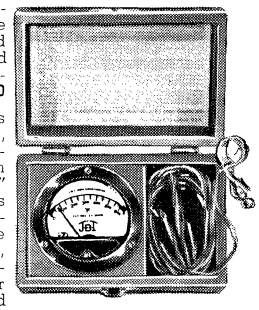
TEMPERATURE TESTERS AND ACCESSORIES FOR APPLIANCE SERVICING, QUALITY INSPECTION, AND LABORATORY SET-UPS

OVEN OR HEAT CHAMBER TESTERS



MODEL 23-JP-1. This popular portable indicating pyrometer saves time and furnishes reliable information in testing and setting thermostats on electric or gas ranges and other appliances by showing oven temperatures as they change. Standard size dial, 0-650°F., with 2⅜" scale arc reading, is used but covered by clear-plastic instrument front. The indicator is mounted on a black metal panel affixed inside a pocket-sized, black top-grain leather case 4½" x 2⅞" x 4¼" over hardware. Characteristic of more expensive pyrometers, the 23-JP-1 is automatically compensated for ambient temperature. Thus the tester eliminates calculations, avoids likelihood of serious error as temperature changes inside the instrument itself, and gives reliable direct readings. Supplied with attached SA-116, 5½' calibrated thermocouple, clip, and convection shield **$26.00**



MODEL 32-JP-3. This time-tested model uses a rigid outer carrying case 6" x 3⅞" x 3¾", covered in black leatherette. The glass-covered indicator shows 0-650°F. range in 10° divisions readable to 2½° on a 2⅜" scale arc. Exceptionally fast, continuous response. Automatic compensation for ambient temperature is a valuable feature whether the tester is used for service work, sales demonstrations, or inspection. Attached SA-116, 5½' thermocouple, clip for affixing to grill and convection shield included **$28.00**

DYNAMIC OUTPUT PRINCIPLE - A sensational new improvement on the time tested Jackson Dynamic Principle. In the Dynamic Output test, variable DC bias voltage, plus variable AC signal voltage are applied to the control grid. Variable DC voltage is applied to plate and screen. The metering circuit, a low impedence bridge type then reads only the AC component of the plate current. Obviously this is the most valid kind of test for amplifiers, it considers the entire output curve of the tube, not just a small portion.

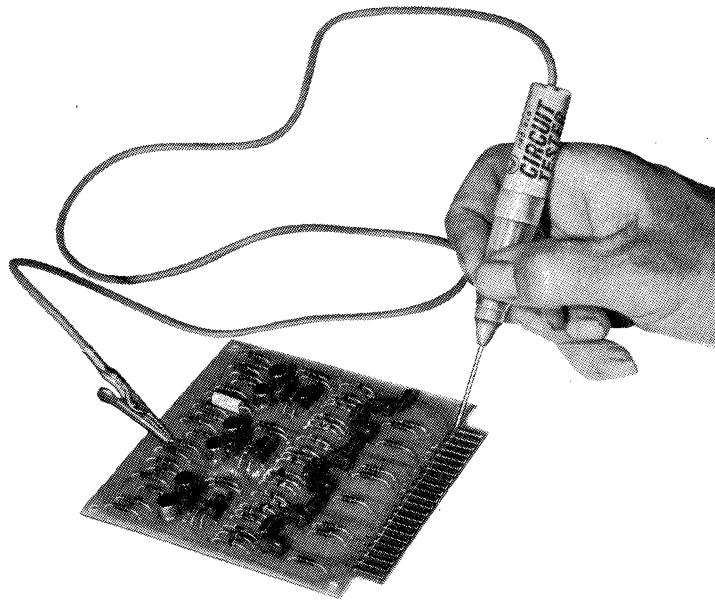
PARAGON® *PRO-GLO*®
CIRCUIT TESTER

A simple, inexpensive instrument for quick checking of non-energized circuits



For Checking

relay contact points
wiring harnesses
ground connections
terminal strips
printed circuits
switches
chassis wiring
fuses
motor windings

and in the Home

extension cords
floor lamps
power tools
fuses
electrical appliances

Consists simply of plastic case containing a battery and lamp, a pointed probe and 3-foot lead wire with alligator clip. In use, clip is connected to ground or common circuit point and probe is touched to various other circuit points. When resistance is less than 1 ohm, lamp glows brightly in translucent case. On open or high resistance circuits, no glow appears, and if continuity is poor, lamp glows dimly.

Signal light at point of contact eliminates necessity for shifting eyes to read meter, increases speed and accuracy in point-to-point testing; avoids distractions from buzzers of nearby workers. Inexpensive enough to be distributed to each person who checks circuits.

To assure long life and reliability, probe and battery contact spring are tin-plated beryllium copper, case is high-impact plastic, and wire is heavy-duty, highly flexible test lead. Uses standard size AA penlight battery and #112 lamp. Model CT-1.

The Transfarad is specifically designed to safely test all low-voltage, low-leakage aluminum, tantalum, film, paper, and ceramic capacitors used in transistorized circuits. A must for modern industrial laboratories and electronic service shops.

- **INSULATION RESISTANCE** directly read from 50 megohms to 20,000 megohms. Only 25v d-c is applied, permitting measurements on low voltage ceramic, mica, and film capacitors. IR of ceramics rated below 25v may be calculated from leakage current measurement at exact rated voltage.
- **LEAKAGE CURRENT** measured directly on meter at exact rated d-c voltage of capacitor. Sensitive circuit makes full scale measurements from 0.6 μA to 600μA in seven ranges.
- **POWER FACTOR** measured by Wien bridge from 0 to 50 per cent.
- **MAGIC EYE** null detector in high-gain amplifier has sensitivity control permitting accurate measurement of small capacitors.
- **SHORT-TIME STABILITY** is assured by dual regulation of the power supply. Specially processed etched circuits and complete encapsulation of the critical bridge-null amplifier insure long-time stability.
- **BINDING POSTS** are shielded against strays, assuring greater accuracy during low capacitance measurements.
- **FOR SAFETY** the capacitor under test is automatically discharged after testing. Three wire line cord grounds instrument case.
- **OPERATING PROCEDURES** are clearly shown on convenient pull-out slide.

SAFELY TESTS TRANSISTOR CIRCUIT CAPACITORS INCLUDING TANTALUM TYPES

- The only analyzer which gives the complete story on tantalum and other low leakage current capacitors.
- **CAPACITANCE BRIDGE** measures 1$\mu\mu$F to 2000μF in five overlapping ranges. Only 0.5 volt is applied to the bridge from a continuously adjustable power supply. The voltage across the capacitor is less than this applied voltage, the amplitude depending on the capacitance being measured. No possibility of overheating or deforming any low voltage capacitor during measurements.
